

Lifting Capacities

Lattice Boom Crawler Crane

LS-308H II 110-ton* (100 metric ton) **HYLAB** Series

Angle Boom Capacities 50' - 160' (15.24 - 48.76 m)

Duty Cycle Capacities

- 50' 120' (15.24 36.58 m) Angle Boom
- Extended Side Frames
- Dragline
- Clamshell / Magnet
- "AB" and "A" Counterweight Options

Angle Boom Capacities

- 50' 160' (15.24 48.77 m) Angle Boom
- 25' (7.62 m) Open Throat Top Section
- Extended / Retracted Side Frames
- 360° Rotation Capacities
- Over End Blocked Capacities
- "AB", "A", and "0" Counterweight Options

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

^{* -} Nominal capacity rating may vary based on specification

Link-Belt CONSTRUCTION EQUIPMENT

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND CHART VALUES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT. THIS DOCUMENT IS INTENDED FOR REFERENCE USE ONLY.

OPERATING INSTRUCTIONS

GENERAL:

- 1. Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
- Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this 7. crane must be in compliance with the information in the 8. Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
- 3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
- All capacities listed in this book are in compliance with ASME/ANSI B30.5c–1998, SAE J987–April 1994, and SAE J–765 October 1990.

LIFT CRANE OPERATION:

- Capacities shown are in pounds and are not more than 75% of 1. the tipping loads with the crane standing level on firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook ball, sling, grapple, etc. When using main hook while jib is attached, reduce 2. capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With Jib Installed. When using main hook while 5 foot tip extension or pile driver lead adapter is attached, reduce capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With 5 Foot Tip Extension or Pile Driver Lead Adapter Installed. See Operator's Manual for all limitations when raising or lowering attachment.
- 2. The crane capacities in the shaded areas are based on structural strength. The crane capacities in the non-shaded areas are based on stability.
- 3. For recommended reeving, parts of line, wire rope type, and 4. wire rope inspection, see Wire Rope Capacity Chart, Operator's Manual, and Parts Manual. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity Chart) is considered excessive and must be accounted for when making lifts. Use Working Range Diagram to estimate the extra feet of rope. See Wire Rope Capacity for the weight to deduct for each extra foot of wire 2. rope before attempting to lift a load.
- 4. Rated lifting capacities in this Crane Rating Manual are based ³. on freely suspended loads and make no allowances for such factors as the effect of ground conditions and operating ⁴. speeds. The operator shall therefore reduce load ratings in order to take these conditions into account.

- Rated lifting capacities do not account for the effects of wind on a suspended load or boom. Lifting capacities should be considered acceptable for wind speeds less than 20 mph and appropriately reduced for wind speeds greater than 20 mph. (See General Wind Restrictions Guide.)
- 6. The capacities listed are for the crane equipped with or without live mast and with the gantry in the raised position.
 - The least stable rated condition is over the side.
 - . Booms should be erected and lowered over the end for maximum stability. See Liftoff Capabilities before erecting or lowering boom.
- 9. Do not operate at radii and boom lengths where the Crane Rating Manual lists no capacity. Do not use longer booms or jibs than those listed in this Crane Rating Manual. Any of the above can cause a tipping condition, or boom and jib failure.
- 10. These capacities apply only to the crane as originally manufactured and normally equipped by Link–Belt Construction Equipment Company.

FOR OVER END BLOCKED CAPACITIES ONLY:

- . These capacities can be lifted over either end with the crane standing level on a firm supporting surface with adequate blocking placed under the tread member sprockets/idlers, to prevent rocking.
- . Do not travel with a load.

TRAVELING WITH A LOAD:

- 1. All 360° Rotation Capacities listed in this Crane Rating Manual are pick and carry capacities.
 - The boom must be pointing straight over one end of the crawler lower. If the load was lifted over the side, swing the load over the end and/or if the load was lifted at a long radius and the load is at or near capacity for that radius, boom up to obtain a greater lifting capacity before beginning travel.
 - Engage the swing lock and apply swing brake.
 - Travel slowly and cautiously on a firm and level-supporting surface.

DEFINITIONS:

- 1. Load Radius: Horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
 - Boom Angle: The angle between the boom base section and horizontal with freely suspended load at the rated radius.
 - Working Area: Area measured in a circular arc about the centerline of rotation as shown on the Working Area Diagram. Freely Suspended Load: Load hanging free with no direct external force applied except by the hoist line.
 - Side Load: Horizontal side force applied to the lifted load either on the ground or in the air.

LIFTOFF CAPABILITIES

360 Over Side ¢ Boor See Note Р Center Of Rotation Longitudina Over Idler C Of Crawler Dver See Note Idler Sprocket C Drive Sprocket Over Side Note: These Lines Determine The Limiting Position Of

WORKING AREAS

Note: These Lines Determine The Limiting Position Of Any Load For Operation Within Working Areas Indicated.

NOTES:

- For maximum boom and maximum boom + jib combinations only adequate blocking must be placed under side frame sprockets/idlers to prevent rocking. The ramps supplied with the crane are considered to be adequate blocking.
- 2. Crane on firm and level surface.
- 3. Gantry pins must be installed with the gantry in the raised position.
- 4. For maximum stability, booms must be erected and lowered over trhe end blocked with no load and with the hook block on the ground.

GENERAL WIND RESTRICTIONS GUIDE

🛕 WARNING

Failure to follow these wind speed restrictions may result in structural failure of the boom, which would cause property damage and/or bodily injury.

- The effects of the wind force on the hook load are the responsibility of the user and are not taken into account. When hoisting any load in windy conditions, the load wind area and load controllability must be considered for safe crane operation.
- 2. Wind speed is to be determined at the boom top section.

WIND SPEED CHART

Boom and Boom + Jib Lengths: 50' to 215'										
DESCRIPTION	ALLOWABLE WINDSPEEDS									
1. Normal Lifting Operation. (See Capacity Charts.)	0–20 m.p.h.									
2. Reduced Operation. Capacities must be reduced by 20%.	21–30 m.p.h.									
3. Reduced Operation. Capacities must be reduced by 40%.	31–40 m.p.h.									
4. Reduced Operation. Capacities must be reduced by 70%.	41–45 m.p.h.									
4. No Operation. Store Attachment On Ground.	Over 45 m.p.h.

BOOM BASE SELF ASSEMBLY LIFTING SHEAVES CAPACITIES

Radius (ft)	Boom Angle (deg)	Capacity (lb)
9.1	82.0	26,500
10.0–20.0	79.1–41.9	26,500

NOTES:

- 1. Rated capacities are for 360 $^\circ$ rotation.
- 2. Gantry must be pinned in the raised position when lifting loads with the sheaves in the base section.
- 3. Backstops must be assembled to base section.
- 4. For self assembly/disassembly of counterweights, boom extensions, and side frames only.
- Rated capacities are for extended or retracted side frames with or without counterweight or on carbody jacks without counterweight. 6. Reeve boom base section self assembly lifting sheaves with front drum rope only.

DUTY CYCLE NOTES FOR ANGLE BOOM

1. The capacities included in the "Duty Cycle Capacities – Angle Boom" curve are the maximum allowable, and are base on an LS–308H II crawler crane with "AB" (50,851 lb) or "A" (23,668 lb) counterweight standing level on firm supporting surface under ideal job conditions.

2. Capacities are based on 75% of minimum tipping loads for dragline; 67.5% for clamshell.

3.Capacities are maximum recommended by PCSA Standard #4. Operator must make allowances for soft or uneven supporting surfaces, rapid cycle operations, bucket suction, or other unfavorable conditions which may require smaller buckets for most efficient operation.

4. Weight of bucket plus load must not exceed these capacities.

5. Dragline operation is not recommended with boom angles less than $35\,^\circ.$

6. Boom length for dragline/clamshell attachment operation should not exceed 120'.

7. Retractable high gantry must be pinned in the raised position for all capacities on the "Duty Cycle Capacities – Angle Boom" curve.

8. These capacities apply to the crane as originally manufactured and normally equipped by Link–Belt Construction Equipment Company.

Notes:

1. Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.

2. Maximum and minimum boom angles are equal to the values listed in the capacity chart for each boom length.

CAPACITY DEDUCTIONS FOR LIFTING OFF MAIN BOOM HOOK WITH JIB INSTALLED

When using main boom hook, while jib is attached, reduce boom capacities by the values in the following chart:

Jib Length (ft.)	Capacity Deduction (Ib)
30	2,100
45	2,800
60	3,500
75	4,400

CAPACITY DEDUCTIONS FOR LIFTING OFF MAIN BOOM HOOK WITH 5 FOOT TIP EXTENSION OR PILE DRIVER LEAD ADAPTERS INSTALLED

When using main boom hook, while 5 foot tip extension or pile driver lead adapter is attached, reduce boom capacities by the values in the following chart:

Extension/Adapter	Capacity Deduction (lb)
5' Tip	700
Pile Driver Lead Adapter	300

MAXIMUM ALLOWABLE CAPACITIES FOR 5 FOOT TIP EXTENSION

LIFTING CAPACITY TO BE THE SMALLEST OF THE FOLLOWING VALUES:

- 1. 18,000 lb (Maximum).
- 2. The standard crane lift capacity minus 700 lb for the crane configuration in use.

NOTES:

- 1. All notes are to be adhered to as listed on the standard lift crane capacity charts .
- 2. Reduce the main boom lift capacities by 700 lb when the tip extension is installed.
- 3. The maximum boom length on which the tip extension can be installed is 150 ft.
- 4. Do not lift or suspend a load from the boom tip extension and main boom at the same time.

MAXIMUM ALLOWABLE CAPACITIES FOR PILE DRIVER LEAD ADAPTER

LIFTING CAPACITY TO BE THE SMALLEST OF THE FOLLOWING VALUES:

100,000 lbs.

 The standard crane lift capacity minus 300 lbs. for crane configuration in use.

OTES:

- 1. All notes are to be adhered to as listed on the standard lift crane capacity charts.
- 2. Reduce the main boom lift capacities by 200 lb when the pile driver lead adapter is installed.
- 3. The maximum boom length on which the pile driver lead adapter can be installed is 150 ft.

Note: Refer To Page 7 For "Capacity Deductions" Caused By Any Attachment At The Boom Tip.
