CRETER CRANE

With over 40 years of continuous improvements and modifications, the Creter Crane exemplifies heavy duty concrete placing. Creter Cranes are used extensively on jobs that require mass amounts of concrete to be placed with accuracy and often in difficult access areas. This machine is also very versital in the fact that it can handle up to 6" aggregate, along with being able to transport many other materials besides concrete such as sand, gravel and backfill.

The Creter Crane boom can achieve elevation angles of +30 degrees to -15 degrees, and a boom swing of 360 degrees. The maximum reach of the Creter Crane boom is 200 feet at horizontal and 174 feet at +30 degrees. Also at the full +30 degree elevation the boom can reach a height of 110 feet.

With such versitility and productivity, the Creter Crane will meet and excede your goals and expectations.
