Professional bulk handling - Turnover up to 800 t per hour

The powerful hydrostatic transmission and advanced Liebherr electronics ensure short, productive working cycles during bulk handling.

- During grab operation, hoisting, slewing, and luffing are driven simultaneously at maximized speed to achieve the highest (possible) turnover.
- During grab filling, features such as automatic lowering and hoisting guarantee the optimum filling level of the grab.
- The slack rope monitoring system ensures extended lifetime of the ropes and increases operational safety.
- Reverse power is returned to the drive process through closed loop hydraulics which results in reduced fuel consumption.
- The Cycoptronic[®] anti-sway system automatically compensates for all rotational swing, transverse and longitudinal sway of the load at maximum speeds.
- To provide safe and stress-free working conditions for the operator, Liebherr offers the Cycoptronic[®] including teach-in[®] feature, a semi-automatic system, which pilots the crane from the vessel hatch to the quay without any sway. Especially for bulk operation into hoppers, the teachin[®] system increases turnover and ensures consistent turnover rates during the entire ship unloading.
- Liebherr technology is absolutely resistant to all types of dust and dirt due to the closed hydraulic system and an electronic system which is military proven and tested.
- The airflow needed for cooling hydraulic and engine systems is routed external from the main machinery house. This helps keep the engine room clean and free of debris.

Professional container handling – Turnover up to 35 cycles per hour

Precision to perfection: With incredibly short acceleration times for all crane motions, Liebherr is the top performer in container handling.

- The crane can be fitted with various types of spreaders (fixed or telescopic) connected to the rotator. Manual, semi or fully automatic telescopic spreaders are available for various container sizes.
- Liebherr Cycoptronic[®] is an accurate, sway-free load motion control system that uses in-house designed software. Cycoptronic[®] allows for direct load positioning and aids the crane driver in mastering his task. With Cycoptronic[®] turnover, safety and the confidence of the operator will be improved.
- Safety: The luffing cylinder is positioned above the lattice boom. This eliminates the possibility of any damage to the cylinder through swinging loads or highly stowed rows of containers on board the vessel.
- The Liebherr hydrostatic drive is the most reliable and highest performing drive system for mobile harbour cranes. Independent closed loop hydraulic systems utilize the minimum number of components to guarantee highly responsive, smooth and precise operation while maximizing operational safety.

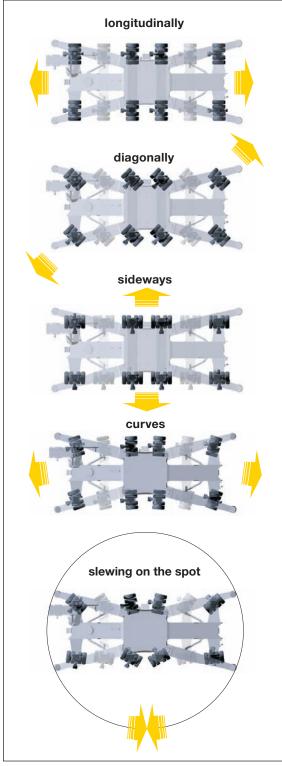

Undercarriage

Mobility

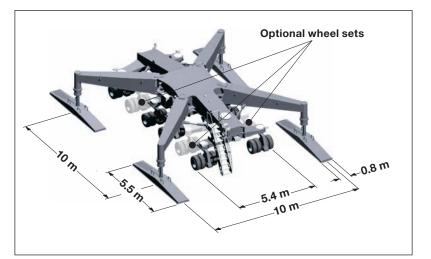

- · Outstanding mobility and manoeuvrability
- Curves at any possible radii and even slewing on the spot

Modular propping system

- Minimised stress and strain of undercarriage due to cruciform support base which directs the load path from boom tip to quay
- Modular system allows further reduction of quay loads by installing additional axle sets
- · Easy adaptation to various sizes of support pads and bases

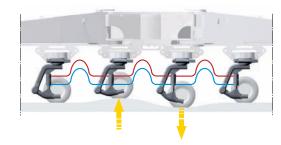

Schematic diagram

Hydraulic load distribution

- Hydraulic suspension avoids overloading of individual wheel sets
- Standard trailer tyres making requisition of spares economical and time-saving
- Increased lifetime of tyres due to individually steerable wheel sets

Optimum pressure distribution and adaption of wheel sets on uneven surfaces

Technical data

Capacity and Classification

Main dimensions

Height of boom fulcrum -

Tower cabin height (eye level) -

Overall length of undercarriage -

Overall width of undercarriage

Overall height (top of tower)

	Capacity	Classification
Grab operation	< 24 t ·	A8
Grab operation	< 35 t -	———— A7
Container	< 35 t -	A7
Heavy lift	64 t -	A4

Propping arrangements

Standard supporting base ———	10 m x 10	m
Standard pad dimension ———	———— 4 x 5.5 m x 0.8	m
Standard supporting area of pads	4.4	m ²
Optional size of supporting pads a	nd bases on request	

Quay load arrangements

Uniformly distributed load	1.36	t/m²
Max. load per tyre	- 5.2	t
Due to a unique undercarriage design its paramete	rs (pa	ıd
sizes, supporting base and number of axle sets) ca	in eas	ily
be adapted to comply with the most stringent quay	load	
restrictions.		

Weight

9-35 m

– 23.5 m

– 12.6 m

– 5.4 m

17.6 m

Total weight

approx. 165 t

Working speeds	
Hoisting / lowering	0 - 90 m/min
Slewing	0 - 1.6 rpm
Luffing	0 - 83 m/min
Travelling	0 - 5.4 km/h

Hoisting heights		
Above quay at minimum radius —	42	m
Above quay at maximum radius	19	m
Below quay level	12	m

Optional equipment

- 1. Cycoptronic[®] anti-sway system
- 2. Teach-In[®] semi-automatic point to point system
- 3. Vertical Line Finder® diagonal pull preventing system
- 4. Dynamic Anti-Collision System
- 5. Synchronizing Crane Control System
- 6. Economy software for optimised fuel consumption
- 7. Modem for data transfer and telediagnosis
- 8. SCULI® (crane analyzer with various features)
- 9. Data Recorder
- 10. Machine Data Recording
- 11. Video monitoring system

- 12. Radio remote control
- 13. Autopropping undercarriage
- 14. Cyclone air-intake system for the engine
- 15. Low temperature package
- 16. Tropical temperature package
- 17. Customer-specific painting & logo
- 18. Additional (driven) axle sets
- 19. Axle sets equipped with foamed tyres
- 20. Different supporting bases and pad sizes
- 21. And many more as per customers requirements

Practical solutions

Liebherr develops and produces special designs and solutions to meet customer-specific requirements

- The Liebherr Portal Crane, LPS, is an efficient combination of a space-saving portal (mounted on rails) and the proven mobile harbour crane concept. Particularly on narrow quays, individual portal solutions permit (railway) trains and (road) trucks to travel below the portal.
- Liebherr floating cranes, LBS, can be used for transhipment and midstream operation between ocean-going vessels and river barges on different types of waterways, including those

having no or few quays. In addition, the LBS solution allows direct cargo transfer from ship to shore – especially when quays reach capacity limits.

Depending on customer specifications, the LBS range may have varying lifting capacities due to tailor-made design solutions.
