# MANITOWOC M-65W - 65-MTon liftcrane

6,804 KG CLAMSHELL 6,124 KG DRAGLINE

#### WELDEX 45

#### **SPECIFICATIONS**

#### BASIC MACHINE

#### Upperworks

**ROTATING BED:** Fabricated steel rotating bed is mounted on 1.65m diameter turntable bearing.

**DRUMS:** Basic machine is equipped with two full-width drums. Drums are 457mm wide and 419mm diameter. Each drum is antifriction mounted on a separate shaft and is driven independently by a fixed-displacement hydraulic motor through a reduction gear. Internal-expanding drum clutches are spring set, air released. External-contracting drum brakes are air applied, spring released. Parking brakes are spring set, air released.

**BOOM HOIST:** Rear-mounted independent two-drum boom hoist is powered by a fixed-displacement hydraulic motor coupled to a planetary reduction, and is equipped with ratchet and pawl.

**SWING SYSTEM:** Front-mounted independent swing is powered by a fixed-displacement hydraulic motor coupled to an internal brake and planetary reduction. Includes gear-segment type swing lock.

**OPERATOR'S STATION:** Fully enclosed and insulated steel module mounted to the left front corner of rotating bed. Module is equipped with sliding door, large safety glass windows on all sides and roof. Electric signal horn, cab space heater, upper front windshield wiper, dome light, and air circulating fan are standard equipment.

#### Lowerworks

**CARBODY:** Single-piece steel fabricated carbody incorporates wide wings that facilitate removal from pockets in crawler frames. Crawlers hydraulically extend to 5.09m and hydraulically retract to 3.50m.

.....

**CRAWLERS:** Crawler assemblies are 6.80m long reinforced steel fabrications with 914mm closed treads and sealed "low-maintenance" rollers. Each crawler is powered independently by a variable-displacement hydraulic motor driving through a planetary reduction. Crawlers provide counter-rotation capability.

**ENGINE/TRANSMISSION:** Cummins 6 CT 8.3 diesel engine rated at 157 KW at 2200 RPM provides independent power for all machine operations through the multihydraulic-pump transmission. Power system also includes engine block heater (120V), high silencing muffler, hydraulic oil cooler, radiator, and fan.

**CONTROLS:** Modulating electric-over-hydraulic controls provide infinite function speed response directly proportional to control movement. Selector switch permits hoisting drums to be operated in power-down (liftcrane), freefall (excavator), or clamshell mode.

\*Chart data based on 419mm diameter smooth drum, 5th layer.

SWING SPEED: 3.5 RPM.

TRAVEL SPEED: 1.61 KPH.

GRADEABILITY: 30%.

**BOOM HOIST SPEED:** 57.9m boom, 0° to 82° - 1 minute, 27 seconds.

#### LIFTCRANE ATTACHMENT

**BASIC BOOM:** The liftcrane is equipped with 12.19m No. 46 basic boom consisting of 6.40m butt and 5.79m top with five 508mm diameter antifriction-bearing-mounted steel sheaves. Includes rope guides, boom hoist wire rope, boom angle indicator, and hook and weight ball.

Gantry with telescopic backhitch and power operated backhitch pins.

Telescopic air-cushioned boom stop.

Automatic boom stop.

**COUNTERWEIGHT:** Two-piece removable counterweight, total 19,051 Kgs., with power-operated pins and with counterweight-handling pendants.

#### **OPTIONAL EQUIPMENT**

#### BOOM AND JIB:

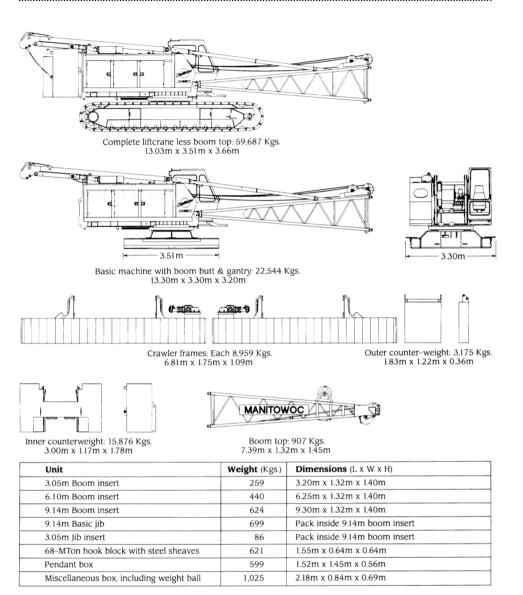

3.05m No. 46 Boom insert with pendants 6.10m No. 46 Boom insert with pendants 9.14m No. 46 Boom insert with pendants 9.14m No. 130 Jib with mounting parts 3.05m Jib insert with pendants

#### ATTACHMENTS:

Manitowoc 68-mton five-sheave load block Single-sheave upper boom point (whipline) Pendant links for load-moment sensor pin Dragline fairlead Tagline, Rud-O-Matic No. 1248, two barrel Liftcrane lagging, 457mm diameter, grooved for 19mm diameter rope — front/rear Clamshell/dragline lagging, 457mm diameter, grooved for 19mm diameter rope — front/rear Lift/clam/drag wire rope, 19mm diameter, 6x25 EIPS Machine preparation for X-SPANDER® X-SPANDER attachment Other attachments on request

#### BASIC MACHINE OPTIONS:

Split drum shaft assembly in place of single drum shaft Drum rotation indicators (2) Windshield wiper, lower front window Windshield wiper, roof window Ether starting aid Alcohol injector in air line Fire extinguisher Air conditioner in operator's cab Hydraulic third drum on front of rotating bed, 4,400 kg. line pull Special paint — machinery enamel in color other than Manitowoc standard Block up limit control for load or auxiliary line Bail limit control for hoist drums

#### 19 050 KG COUNTERWEIGHT 6 807 MM CRAWLERS EXTENDED 360° RATING

Capacities for various boom lengths and operating radii are for freely suspended loads and are calculated to comply with BS 1757-1986 clause 9, I.S.O. 4305 and BS 2573 part I – 1983 tables 5(a) and 6(a). Capacities based on structural competence are denoted by an asterisk(\*).

Upper boom point capacity for liftcrane service with single part whip line is 6 800kg. In all cases, upper boom point capacities cannot exceed those listed for the main boom capacity.

Weight of jib, all load blocks, hooks, weight ball, slings hoist lines, etc., beneath boom and jib point sheaves, is considered part of the main boom load. Boom is not to be lowered beyond radii where combined weights are greater than rated capacity. Where no capacity is shown, operation is not intended or approved.

Machine to operate in a level position on a firm uniformly supporting surface with crawlers fully extended (5 093mm) and gantry up. Refer to rigging no. 168744 and wire rope specification chart no. 7536-A. Crane operator judgement must be used to allow for dynamic load effects of swinging, hoisting or lowering, travel, wind conditions, as well as adverse operating conditions and physical machine depreciation. Machine may be operated in winds up to those shown in table provided crane operator judgement is used to allow for wind effect on the lifted load and other considerations noted on the capacity chart are followed. Wind will have a considerable effect on a load with a large 'sail area' and must be compensated for accordingly by reducing load ratings, reducing operating speeds or by a combination of both. Recommend stopping operation when wind is above those shown in table and tieing off or lowering boom when wind is above 16 m/s.

Machine to travel on a firm, level and uniformly supporting surface and boom within the boom angle range shown in capacity chart.

Operating radius is the horizontal distance from the axis of rotation to the centre of vertical hoist line or load block. Boom angle is the angle between horizontal and centreline of boom butt and inserts, and is an indication of operating radius. In all cases, operating radius shall govern capacity. Boom point elevation is vertical distance from ground level to centreline of boom point shaft.

Machine equipped with 6 807mm extendible crawlers, 914mm treads, 5 182mm retractable gantry, 12 part boom hoist reeving, two 32mm boom pendants, 1st counterweight = 15 875kg, and 2nd counterweight = 3 175kg.

#### 6 807 MM CRAWLERS EXTENDED

360° RATING

Chart supplements boom capacity chart no. 7534-AM. Capacities for various boom lengths, jib lengths and jib operating radii are for freely suspended loads and are calculated to comply with BS 1757-1986 clause 9, I.S.O. 4305 and BS 2573 part I - 1983 tables 5(a) and 6(a). Capacities based on structural competence are denoted by an asterisk(\*).

19 050 KG COUNTERWEIGHT

Weight of all load blocks, hooks, weight ball, slings hoist lines, etc., beneath boom and jib point sheaves, is considered part of the jib load. Boom and jib are not to be lowered beyond radii where combined weights are greater than rated capacity. Where no capacity is shown, operation is not intended or approved.

Machine to operate in a level position on a firm uniformly supporting surface with crawlers fully extended (5 093mm) and gantry up. Refer to boom rigging no. 168744, jib assembly no. 167951 and wire rope specification chart no. 7536-A. Crane operator judgement must be used to allow for dynamic load effects of swinging, hoisting or lowering, travel, wind conditions, as well as adverse operating conditions and physical machine depreciation.

Machine may be operated in winds up to those shown in table provided crane operator judgement is used to allow for wind effect on the lifted load and other considerations noted on the capacity chart are followed. Wind will have a considerable effect on a load with a large 'sail area' and must be compensated for accordingly by reducing load ratings, reducing operating speeds or by a combination of both. Recommend stopping operation when wind is above those shown in table and tieing off or lowering boom when wind is above 16 m/s.

Machine to travel on a firm, level and uniformly supporting surface and boom within the boom angle range shown in capacity chart.

Operating radius is the horizontal distance from the axis of rotation to the centre of vertical hoist line or load block. Boom angle is the angle between horizontal and centreline of boom butt and inserts, and is an indication of operating radius. In all cases, operating radius shall govern capacity. Jib point elevation is vertical distance from ground level to centreline of jib point shaft.

Machine equipped with 6 807mm extendible crawlers, 914mm treads, 5 182mm retractable gantry, 12 part boom hoist reeving, two 32mm boom pendants, 1st counterweight = 15 875kg, and 2nd counterweight = 3 175kg.

#### Maximum capacity on 19mm British Dyform 6/8 1960 N/mm<sup>2</sup> wire rope is 6 800kg.
